Hiring Manager

Sony Interactive Entertainment

San Mateo, CA

Dear Hiring Manager,

I'm Ajay Venkatesh, completing an M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm applying for the Software Engineer II role, where I'd help build high-quality product experiences across web and mobile surfaces in the PlayStation ecosystem.

At NYU, I developed business-critical **web** and **mobile** applications in **React**, **TypeScript**, **JavaScript**, **HTML/CSS**, and **React Native**, including **Stripe** billing flows for subscription-style commerce. I also built a cross-platform app for **iOS** and **Android** integrated with backend **REST APIs**, partnered with product stakeholders on requirements, and deployed services with **Docker** on **AWS EC2**.

At Amazon, I shipped **React** and **TypeScript** UI with **performance optimization** through caching and code splitting, wrote **Jest** and component tests, and released through **CI/CD pipelines** with disciplined pull-request reviews. At CampusMesh, I deliver **JavaScript/TypeScript** features on **AWS** with monitoring hooks, and at PwC I shipped enterprise web applications on **Azure** with strong code review culture.

My stack includes **JavaScript**, **TypeScript**, **React**, **React Native**, **HTML**, **CSS**, **Jest**, **Java**, **GraphQL**, **REST APIs**, **Docker**, and **Git**. **Spring Boot** and dedicated PlayStation console application work are areas I have not shipped in production yet, but my commerce-integrated product delivery, cross-platform mobile experience, and tested frontend engineering give me a strong base to ramp quickly on SIE's stack.

What pulls me toward Sony Interactive Entertainment is the chance to build player-facing experiences where polish, performance, and reliability matter on every screen, from commerce flows to subscription services across web and mobile. I care about sustainable, well-tested code and collaborating closely with product partners, and I'd welcome contributing to that mission from Brooklyn.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
