Hiring Manager

Accrete AI

New York, NY

Dear Hiring Manager,

My name is Ajay Venkatesh. I'm finishing my M.S. in Computer Engineering at NYU, with production software experience at PwC in Bengaluru, a summer SDE internship at Amazon, and ongoing on-campus work at NYU's Novel AI Technologies. I'm writing about the Junior DevOps Engineer role.

The strongest match is the infrastructure work I've owned at Campus Mesh. I deployed a **serverless backend** on AWS using the **Serverless Framework** with **Lambda**, **API Gateway**, **S3**, and **CloudFront** across four environments (local, dev, staging, and production), enforcing security with **KMS-managed keys**, **SSM Parameter Store**, and **least-privilege IAM**. The work touched every part of the CI/CD lifecycle: bundling Lambdas with esbuild to cut cold starts, modeling high-throughput **DynamoDB** tables with partition and sort keys, and standing up automated promotion across environments.

In parallel, at Amazon I provisioned **Infrastructure-as-Code** on **AWS CDK** with **API Gateway**, **Lambda**, **DynamoDB**, **S3**, and **IAM**, behind a **multi-stage and multi-region CI/CD pipeline** with automated promotion and rollback controls. I worked across security, build, and deploy concerns daily, integrated **Midway SSO**, **OAuth**, and **HELIS** for role-based access, and shipped under careful code-review discipline.

On overlap with your stack: **AWS** (**Lambda**, **EC2**, **S3**, **DynamoDB**, **IAM**, **API Gateway**, **CDK**, **CloudFront**), **Docker**, **Kubernetes**, **Terraform**-style IaC patterns, CI/CD with **multi-stage promotion and rollback**, **Linux** and **shell scripting** as daily tools, and the **monitoring and logging surface** via CloudWatch and equivalent dashboards on the Azure side at PwC. **Helm**, **Prometheus**, and **Grafana** are tools I've worked alongside but not led, and I'd plan to come up the curve on them quickly inside the existing platform.

What pulls me toward Accrete is the product. A **Knowledge Engine** that lets organizations deploy expert AI agents for autonomous decisions is exactly the kind of platform where reliable infrastructure earns its keep. If the agents are answering real questions for real customers, the deployment pipeline, the monitoring surface, and the security posture are not background concerns, they are the product. That kind of work, where DevOps maturity directly enables AI to be trusted, is exactly where I'd like to compound my career, and I'd love to do it here in New York alongside a team building toward that.

I'd welcome the chance to discuss further. Thanks for considering my application.

Sincerely,

Ajay Venkatesh
