

Education

New York University | *Master of Science in Computer Engineering (GPA – 3.9/4)*

Aug 2024 – May 2026

Experience

PricewaterhouseCoopers (PwC)

Aug 2021 – Aug 2024

Dynamics 365 and Power Platform Developer

- Developed a **B2B Dynamics 365 app** for customer acquisition and onboarding, including importing external data and visualization using **Power BI**, resulting in a **40%** reduction in onboarding time and a **30%** increase in accuracy of customer journey tracking.
- Created and implemented a customer-facing portal with **live chat functionality (Omnichannel)** to automatically generate cases, contacts, and tasks, which directly reduced manual case entry by **70%** and customer support response time by **25%**.
- Built client and server-side customizations using **JavaScript, plugins, workflows, webhooks**, and **REST APIs** within **Dynamics CRM**, validated end-to-end with **Postman**, lowering query execution time from 1.5s to under 1s (**35% faster** server response).
- Managed end-user accounts, permissions, and security roles on Dynamics 365, developing **6 specific security plans** utilizing **Azure security groups**, achieving **100%** fewer incidents of unauthorized access and optimizing account provisioning time by **50%**.
- Created and implemented custom controls in **Power Apps Component Framework (PCF)** to design reusable UI elements with sophisticated data binding features and responsive design, cutting down redundant UI development work by **60%** and raising user satisfaction ratings by **15%**.
- Orchestrated business-process automation with **Azure Logic Apps, Power Automate flows**, and Plugins for validation, notifications, and downstream API integrations, cutting **100K**-record import time from 5 hours to **1 hour (80% efficiency gain)** and saving **\$15K** annually.
- Combined **5 Power BI dashboard solutions** into portals and applications to analyze data, resulting in a **60%** acceleration of executive decision-making by shortening turnaround on reports from 2 days to real-time.
- Authored Low-Level Architecture for MSDVI On Board across the **SDLC** with **code reviews, root cause analysis**, and integration logging/monitoring, deploying through **Azure DevOps** pipelines — cutting production defects by **25%**.
- Developed and customized **Power Portals** using Liquid and web templates, incorporating advanced form functionality and entity permissions, which cut manual configurations by **50%** and optimized portal loading by **20%**.

Amazon

May 2025 – Aug 2025

Software Development Engineer Intern (AI / GenAI)

Seattle, US

- Deployed a **Retrieval-Augmented Generation (RAG)** pipeline with an **agentic workflow** that autonomously retrieves operational logs to reason over incident details, generating context-aware summaries and remediation steps.
- Implemented a **Model Context Protocol (MCP)** server for efficient tool-augmented retrieval, cutting AWS Athena query time and compute costs by **40%**.
- Built a high-throughput, event-driven incident triage system on **AWS ECS Fargate, SQS, SNS**, decoupling distributed message processing and reducing response latency by **50%**; provisioned resilient **Infrastructure-as-Code** on **AWS CDK** at **99.9%** availability.

New York University

Aug 2024 – May 2025

Software Developer (On-Campus)

New York, US

- Contributed to an AI-driven Remote Patient Monitoring System, awarded **\$100K** by the National Science Foundation, USA, employing **React Native, TypeScript**, and Cognito authentication for real-time health monitoring.
- Authored parallelized **ETL pipelines** in Python to convert unstructured NoSQL data into structured SQL using **GCP Cloud Functions**, leveraging concurrent processing of data chunks, reducing transformation time by **60%**.
- Developed a React website to host **QuickSight dashboard** handling **50K+** records, utilized **Cognito, Amplify**, and Lambda functions to establish login, role-based access control, and Stripe integration for payment gateway.

Projects

InviLite | AWS, SageMaker, Bedrock, FAISS, Python

- Architected a cloud-native data pipeline (**Kinesis, Lambda, S3, Glue, DynamoDB**) ingesting structured and unstructured enterprise data into governed ML pipelines.
- Built a **RAG system** (SVM + FAISS + **Bedrock LLM**), cutting incident resolution from **1–2 hours to minutes** and lifting root-cause classification accuracy from **56% to 92%**.

Skills

Programming Languages: C#, DAX, JavaScript, TypeScript, SQL (T-SQL), Python

Web Development: HTML, CSS, REST APIs, PowerApps, Power Portals, React, Node.js, Express.js, Spring Boot

Database: Dataverse, SQL Server, MySQL, RDBMS, NoSQL, Stored Procedures

Cloud: Azure (Logic Apps, AI Services, Databricks, Function Apps, Storage Blobs, Security Groups)

Tools: Git, Azure DevOps (Pipelines), Postman, Visual Studio, Dynamics CRM 365, ERP, XRM Toolbox, .NET, Power Automate, Power BI

Methodology: Agile, Waterfall

AI/ML: PyTorch, Hugging Face, LLM Fine-tuning, RAG (LangChain, FAISS), NLP, SVM, Random Forest, MLflow, PySpark

Certifications %

AWS Certified Cloud Practitioner %	Azure Data Fundamentals %	Azure Data Scientist Associate %
Power Platform Fundamentals %	Power Platform App Maker Associate %	Power Platform Functional Consultant %
Power Platform Developer Associate %	Power Platform Solution Architect Expert %	Power BI Data Analyst Associate %
