

## Education

**New York University** | *Master of Science in Computer Engineering (GPA – 3.9/4)*

Sep 2024 – May 2026

• *Coursework:* System Design, Machine Learning, Deep Learning, Big Data, Advanced Java, Data Structures

## Skills

**Programming Languages:** Python, Java, C++, TypeScript, JavaScript (ES6), SQL

**Web Technologies:** REST API, GraphQL API, Microservices, React, Node.js, Express.js, Sequelize

**Database:** RDBMS (MySQL, PostgreSQL), NoSQL (Dynamo DB, FireBase, MongoDB), Dataverse

**Cloud:** AWS (AWS CDK, EC2, S3, Dynamo DB, API Gateway, Lambda, Cognito, IAM, Q, SageMaker), Azure (OpenAI services, Function Apps, Security Data lakes, Storage blobs)

**Tools:** Git, Visual Studio, Cursor, Jupyter, Postman, Docker, Power Automate, Power BI, QuickSight

**AI/ML:** PyTorch, Hugging Face, LLM Fine-tuning, RAG (LangChain, FAISS), NLP, SVM, Random Forest, MLflow, PySpark

## Experience

### CampusMesh

Jan 2026 – Present

**Software Engineer** | *Real-time microservices, recommendation engine, and LLM-based AI retrieval pipelines*

- Developed scalable **Node.js microservices** powering real-time academic workflows across study groups, messaging, calls, notifications, and profile management, backed by **MySQL (Sequelize)** and **DynamoDB**.
- Deployed **serverless architecture** on AWS using **Serverless Framework** with **Lambda, API Gateway, S3, and CloudFront** across **4 environments** (local, dev, staging, production); enforced security with **KMS-managed keys, SSM Parameter Store, and least-privilege IAM**.
- Worked on **LLM-based retrieval pipelines (RAG)** for CampusIQ (AI Assistant), leveraging **embedding-based semantic search** and structured data indexing to improve contextual accuracy by **30%**.

### Amazon

May 2025 – Aug 2025

**Software Development Engineer Intern** | *Serverless AWS infrastructure, React 18 frontend, and Java backend systems*

- Architected a secure UI console for Amazon fulfillment center teams to view image/video evidence across FCs; presented the **system design** for approval and established Role Based Access (**4+ roles**) using **OAuth, Midway SSO, and HELIS**.
- Provisioned **serverless Infrastructure-as-Code** using **AWS CDK** with API Gateway, Lambda, DynamoDB, S3, and IAM, reducing provisioning time by **70%** and enabling **multi-stage, multi-region CI/CD deployments**.
- Built a **React 18** frontend with optimized API integration, advanced filtering, client-side caching, reducing page load time by **40%**.
- Engineered backend services in **Java** using **Coral, Smithy, Dagger**, and **CBOR serialization**; applied **low-level design and design patterns** reduced backend execution time by **35%** and ensure reliability by unit and integration testing using **Mockito**.

### New York University (Novel AI Technologies, Inc.)

Aug 2024 – Present

**Software Developer (On-Campus)** | *NSF-funded AI health platform, ETL pipelines, and full-stack insurance analytics*

- Architected an **NSF-funded (\$100K)** AI-powered health app for **iOS** and **Android**, processing real-time wearable data; deployed cloud-hosted AI models for health metrix analysis and process food images.
- Engineered ETL pipelines transforming **NoSQL** into **PostgreSQL** using **concurrency control and locking mechanisms**; processed **250K+** records and powered **AWS QuickSight** dashboards for real-time health analytics.
- Developed an insurance analytics platform (**React, Node.js, REST APIs**); deployed (**Docker** containers on **EC2**, implemented Stripe billing, RBAC, and row-level security, generating **\$50K+** revenue.
- Streamlined underwriting via broker portal integrated with insurer platform; implemented **document and media processing** and **WebSocket-based real-time communication**; secured **6 insurance clients**.

### PricewaterhouseCoopers (PwC)

Aug 2021 – Aug 2024

**Senior Software Engineer** | *Cloud-native backend, NLP/OCR automation, and data engineering on Azure*

- Developed a distributed backend on **Microsoft Azure** for a health platform, integrating with **Microsoft CRM** and implementing event-driven processing and fault tolerance.
- Led code reviews and mentored engineers on **software design principles**, reducing production bugs by **25%**.
- Deployed an **NLP based OCR neural model** on Azure to automate structured data extraction, reducing data processing time by **75%**.
- Optimized data ingestion with **parallel processing** for **100K-row** from Excel; reduced execution time from **5 hours to 1 hour**.
- Built **Power BI dashboards** processing large datasets from multiple databases, improving reporting efficiency by **40%**.

## Projects

**Personal Finance Analyzer (Python Data Analysis Project)** | *Python, Pandas, NumPy, Matplotlib, Seaborn*

- Built a data-driven application to analyze personal financial transactions and categorize expenses using **Pandas** for efficient data processing.
- Generated interactive visualizations and spending insights using **Matplotlib** and **Seaborn** to identify trends and optimize budgeting.
- Designed reusable and modular code structure following **OOP principles** to improve maintainability and scalability.

## Certifications

**AWS Cloud Practitioner** 🏆  
**Power BI Data Analyst Associate** 🏆

**Azure Data Fundamentals** 🏆  
**Microsoft Developer Associate** 🏆

**Microsoft Solution Architect Expert** 🏆  
**Stanford Machine Learning (Coursera)** 🏆
